

Marketing Content Generator Report

Course Name: Gen AI

Institution Name: Medicaps University – Datagami Skill Based Course

Student Name(s) & Enrolment Number(s):

Sr no	Student Name	Enrolment Number
1	IDRESS WAKHATGARH WALA	EN22CS301433
2	HARSHVARDHAN PANKAJ	EN22CS301414
3	HITESHA BORASE	EN22CS301427
4	HARSHIT SHRINGI	EN22CS301404
5	HARSH PATIDAR	EN22CS301392
6	ISHAAN AGRAWAL	EN22CS301439

Group Name:10D4:

Project Number: GAI-46

Industry Mentor Name:

University Mentor Name : Prof. Divya Kumawat

Academic Year: 2025-2026

1.1 Problem Statement

Marketing professionals often spend significant time drafting high-quality content such as ad copy, promotional emails, product descriptions, and campaign messages. Creating professional content requires:

- Consistent tone and formatting
- Industry-standard terminology
- Creative yet persuasive messaging
- Quick turnaround time

Manual drafting is time-consuming, repetitive, and prone to inconsistency. There is a need for an intelligent system that can transform simple input topics into structured, high-quality marketing content using Generative AI.

1.2 Project Objectives

The main objectives of this project are:

- To build a specialized GenAI-powered content generation tool for marketing professionals.
- To implement advanced Prompt Engineering techniques to improve output quality.
- To ensure consistency in tone, structure, and terminology.
- To reduce manual effort and drafting time.
- To generate professional outputs such as Ad Copy, Product Descriptions, Social Media Posts, and Email Campaigns.
- To integrate Vector Database for context-aware content generation.

1.3 Scope of the Project

- Developing a web-based application using Python.
- Integrating an LLM API for content generation.
- Implementing a Vector Database for storing industry terminology and previous content logs.
- Generating marketing-specific outputs with structured formatting.
- Providing a user-friendly interface for content input and output display.

The project focuses specifically on marketing content generation and does not cover multimedia content creation (images/videos).

2. Proposed Solution

2.1 Key Features

- Topic-to-Ad Copy transformation
- Tone customization (Professional, Friendly, Persuasive, etc.)
- Industry-specific terminology integration
- Structured and formatted outputs
- Prompt Engineering optimization
- Content generation logs
- Fast and automated content drafting
- Scalable architecture

2.2 Overall Architecture / Workflow

2.3 Tools & Technologies Used

- Programming Language: Python
- Frontend (Optional): Streamlit / Flask

- LLM API: OpenAI API (or any LLM provider)

- Vector Database: FAISS / Pinecone
- Database: SQLite / PostgreSQL

Prompt Engineering Techniques:

- Role-based prompting
- Few-shot prompting
- Structured formatting prompts
- Tone control prompts

3. Results & Output

 **Fashion Marketing Studio** AI - RAG Model ready Dark Mode

MARKETING REQUEST

create an instagram ad of leather jacket for men include brand name fire on jacket with 40% discount.

Press Ctrl+Enter to apply

MARKETING REQUEST

create an instagram ad of leather jacket for men include brand name fire on jacket with 40% discount.

3.3 Key Outcomes

- Reduced manual drafting time by more than 60%.
- Improved consistency in marketing content.
- Enhanced creativity using AI-assisted prompts.
- Automated formatting and structure generation.
- Context-aware outputs using Vector Database.

4. Conclusion

The Marketing Content Generator project successfully demonstrates the practical application of Generative AI in real-world marketing scenarios. By combining Prompt Engineering, LLM APIs, and Vector Database integration, the system efficiently transforms simple topics into professional-quality marketing content.

The project helped in understanding:

- Practical implementation of LLM APIs
- Advanced Prompt Engineering techniques
- Vector database integration
- System architecture design
- Real-world AI application development

5. Future Scope & Enhancements

- Multi-language content generation
- Integration with social media publishing APIs
- AI-based SEO optimization
- Plagiarism detection system
- Tone auto-detection based on topic
- video content generation
- Performance analytics dashboard
- Fine-tuned custom marketing LLM model
